

Assignment 6

Project Status Presentation

Presentation Date: Thursday, August 27th (in-class)

Slide Submissions Due: Wednesday, August 26th @ 11:59 PM(via Digii)

Team Number	
Project Title	
Team Members	

Overview

Last few assignments explore the progression of your project from a raw dataset to a working analysis (hypothesis, exploratory analysis, and a design-critique pass).

Outcome of this assignment: Step back and tell that story in 10 minutes, to an audience of your peers who will evaluate you.

Focus on making the work you’ve already done legible and convincing to someone seeing it for the first time.

Ground Rules for Presentation

- 10 minutes per team, hard cutoff; panels will stop teams at 10:00 even mid-sentence
- Every team member must speak for a meaningful portion; panels will note if one person dominates
- Slides due before your presentation slot; see Deliverables for filename and submission details
- No student may sit on the panel evaluating their own team

What to Put in Your Presentation

- A suggested structure and timing - adjust the balance to your project, but stay close to these minutes.
- Aim for 8–10 slides total; a 10-minute talk with 20 dense slides is itself a design-principles violation.

Section	Min	What to Include	Pulls From
Title & Team	0:30	Project title, team members, one-line description of the dataset	Assignment 1
The Question	1:30	Your hypothesis (or hypotheses) as they stand today, why it matters, what related work told you	Assignments 1, 3
Data & Approach	1:30	Dataset shape/source, how you explored it in Python and R, any data-quality issues you had to handle	Assignments 2, 4
Key Findings	3:00	Your 2–3 strongest results as charts, each with a one-line “so what”	Assignments 2, 4
Design Evolution	1:30	One before/after chart redesign — name the principle(s) applied and why the after-version reads better	Assignment 5, Part 1
What’s Next	1:00	Plan for Power BI/Tableau, any R wrangling insights that will feed into it, open questions or risks	Assignment 5, Part 2
Q&A Buffer	1:00	Held by the panel for questions	—

Note: If your team completed the extra credit practice set, **fold your strongest EC1 example into Key Findings or Design Evolution** rather than adding a separate section. However, no team should run over 10 minutes because they did extra work.

Slide Design Reminders

The Design Principles will govern the slides you present today.

- Apply data-ink ratio and pre-attentive encoding to your SLIDES, not just your charts — six bullet points and three charts on one slide is chart junk at the slide level
- One idea per slide. If you catch yourself about to say “I know this is a lot, but...” — that's two slides
- Every chart needs a direct, written takeaway — not just a title

Evaluation (Panel-Scored)

- Each presentation is scored by a rotating panel of peers using the rubric below.
- Panel members will score independently.
- Panel scoring will carry points.
- Panel scores will be offline and collected at the end of each presentation.

Criterion	What the Panel Should Look For	Points
Clarity of the Question	Is the hypothesis clear? Does the panel understand what's being investigated within the first 2 minutes?	8
Strength of Findings	Are the 2-3 findings genuinely well-supported? Are the charts correctly interpreted, not just shown?	12
Design Principles Applied	Does the before/after redesign show real understanding of pre-attentive/data-ink concepts — not just a cosmetic change?	10
Communication & Time	Clear delivery, participation split across members, finished within 10 minutes, handled Q&A well	10
Slide Design Itself	Are the slides themselves well-designed — one idea per slide, readable from the back of the room?	10

Total: 50 points.

Panel Logistics

- Panels of 3–4 students, rotating so no student ever judges their own team
- Each panel gets one scoring sheet per team, mirroring the rubric above
- Panels hold questions for the dedicated Q&A window rather than interrupting mid-presentation
- A 2-minute buffer between teams gives panels time to finish scoring and reset the room
- Instructor spot-checks a sample of panels' scoring conversations early on to calibrate — wide score variance between panels on the same team is a signal to recalibrate rubric language, not necessarily a panel error

Deliverables

- Slide deck (PDF or PPTX), submitted before your slot
- Live 10-minute presentation + Q&A
- (Panels submit) one completed scoring sheet per team evaluated
